which is critical in the planetary crises we are facing. Ecosystems in the South of Europe are one of the most vulnerable to climate change. Natural and protected areas are endangered due to the use of tourism as claims, spaces such as Dunas de Maspalomas and Timanfaya in Spain, Saxon Switzerland in Germany and Czechia, Açores in Portugal or Venice in Italy. Besides that, the lack of control of the number of seasonal visitors puts at risk both the locals

**Insert from line 39 to 41:**

businesses are displaced due to the increasing property value led by implementation of touristic accommodations (hotels, apartments, Airbnbs…) these are the cases of Lisbon, Balearic Islands, Barcelona, Rome, Naples or Athens. In fact, the social, economic and environmental changes caused by this model of

**Reason**

Adding some examples to make clear the situation on touristic places, specially in the South of Europe
