R3 A3: Updated Young Green vision on European defense policy

Proposers Giovani Europeisti Verdi

Motion text

Delete from line 22 to 30:

~~Investment must be smart, addressing modern warfare methods such as cyber-attacks on hospitals, water systems, energy grids, or communication infrastructure which can paralyze societies, cause civilian deaths, and destabilize entire regions — without a single shot being fired and electoral interference that divide our societies. These attacks blur the lines between peace and war. We need to focus on new technologies, not outdated ones like landmines. Investing in European security now will reduce long-term costs by building a unified defense to protect the EU, our citizens, values, and democracy.~~
