**R2 AM13: Climate Adaptation Is Justice: Care for Europe’s Vulnerable Territories**

**Proposers** Executive Committee

**Motion text**

**Insert from line 54 to 56:**

soil restoration, improved water retention, and reduced dependence on unsustainable irrigation. **Food sovereignty and democratic local food systems must become central objectives of European agricultural policy.** Farmers must be supported in adapting to climate change, including through resilient crop varieties.

**Reason**

Food infastructure was mentioned in the demands but not yet in the text. Seeing the effects of climate change on harvests and food qualities, we must ensure that food stays accesible for everyone.
