R2 AM14: Climate Adaptation Is Justice: Care for Europe's Vulnerable Territories

Proposers DWARS

Motion text

From line 68 to 71:

- Recognition of inland, rural, and mountainous areas as key to European climate resilience, ~~**integration of agricultural adaptation into EU policies**, and restoration of rural landscapes~~ the establishment of **binding EU adaptation targets, monitoring and enforcement mechanisms and dedicated public funding** to support their restoration as protections against desertification, floods, and biodiversity loss.

Reason

The EU already has an adaptation strategy, however it lacks binding targets, monitoring, effective enforcement mechanisms and dedicated funding. We also propose to keep the first few demands on general adaptation, then move to agriculture.
