R2 AM17: Climate Adaptation Is Justice: Care for Europe's Vulnerable Territories

Proposers DWARS

Motion text

From line 72 to 74:

- Recognition of agriculture as core climate and food infrastructure~~, support for~~**and the transformation of the Common Agricultural Policy (CAP) toward agroecological** ~~**transitions that build resilience,**~~**resilient and** ~~**investment**~~**non-extractive agricultural systems, seed and food sovereignty including**
  - **the redirection of subsidies away from industrial monocultures, with a binding target for the elimination of all industrial monocultures in** ~~**water-smart**~~ **the EU;**
  - **binding ecological conditionality and mandatory climate and biodiversity spending, rejecting the replacement of common safeguards with voluntary mechanisms;**
  - **accessible financial and technical support for crop diversification, sustainable water management, drought-resistant crops, and farming** ~~**to reduce vulnerability to**~~**practices that strengthen resilience against climate shocks;**
  - **accessible structural financial support for Community Supported Agriculture;**
  - **a ban on the sale of sterile seeds and support for the use and exchange of locally adapted, regional seedsthrough research, knowledge sharing, and financial buffers for risk.**

Reason

We would like to propose more specific and ambitious demands regarding the agroecological transition seen that the draft proposal for the post-2027 CAP has dropped (it's bad, it's all about more deregulation, and the one we have now is already very low in ambition and transformative potential).
