R5 AM7: Universal Basic Services: Towards a Convivial Degrowth Europe

Proposers Zelena omladina Srbije

Motion text

From line 100 to 101:

- **The European Commission and European national governments to design financial and legal solutions for free healthcare.[Space]**
- European governments to systematically reverse the privatisation of core strategic utilities and restore democratic public ownership over essential services, including electricity generation and distribution, universal healthcare, broadband internet infrastructure, water management, and public transport, among others. We demand that these modern commons be fully decommodified, guaranteeing baseline access to everyone free of charge as a fundamental human right while explicitly banning utility and digital disconnections for all households.
