R5 AM8: Universal Basic Services: Towards a Convivial Degrowth Europe

Proposers Grön Ungdom (Sweden)

Motion text

Insert from line 83 to 85:

- **The EU to ensure universal access to nutritious, regenerative, and plant-based food for reasonable prices, this could be done by implementing a public grocery system. Public grocery systems are defined as retail food establishments that are directly owned,**

From line 90 to 92:

- offering goods at affordable and, in some cases, subsidized prices. European governments ~~shall~~should furthemore fund regenerative farms and gardens ~~linked to these public grocery stores (Clark, 2021)~~through the common agricultural policy. [Space]

Reason

Universal access to nutritious, regenerative, and plant-based food for reasonable prices should be provided. The methods used could however differ, with a public grocery system being one. To better fit all of Europe as well as encourage local governance, the grocery system is seen as an example rather than a mandatory reform in our amendment.
